

Critical notes and source limitations

S02 · v002 · Part I, printed pages 1–30

This apparatus is MODERN_EDITORIAL. It is separate from Nallino's historical Latin translation and notes. It records what the supplied scan supports; no new target-language translation or Arabic canonical correction is issued.

The reader preserves printed wording, numerals, note calls and source-line divisions. Irregularities are not silently harmonized. Three damaged character objects are preserved as exact source images within otherwise editable text or tables. Their unresolved interpretation does not mean that the source object has been omitted.

Unresolved character readings

S02-U001 · Table

Printed p. 7; AB01-PDF0096-T01-R04-C10

1 followed by a damaged digit, retained as source image.

1٢

Enlarged source fragment; no reconstructed strokes.

12 is plausible from the surviving strokes; no numeric reading accepted. The CSV/TSV has an image marker, not 12. Certainty: high for pixel preservation; unresolved character reading.

S02-U002 · Formula

Printed p. 12; AB01-PDF0101-notes_right-L003

59°3[damaged digit]' within the numerator, retained as source image.

59° 33'

Enlarged source fragment; no reconstructed strokes.

59°36' / 59°35'; 36 is supported by the body reading, but not imposed on the damaged note. No arithmetic correction; printed 72°2' and 36°1' retained. Certainty: high for exact image; minute digit unresolved.

S02-U003 · Reading

Printed p. 18; AB01-PDF0107-notes_right-L017

Damaged Arabic spelling following corruptum.

الدقة.

Enlarged source fragment; no reconstructed strokes.

No defensible complete character transcription assigned; exact image is the diplomatic object. No modern place-name substituted. Certainty: high for pixels; character interpretation withheld.

Printed discrepancies and copy evidence

S02-C001 · Reading

Printed p. 16; AB01-PDF0105-body-L035; AB01-PDF0105-body-L038

78°23' in the first statement; 78°28' in the repeated value. Both are printed; no harmonization selected. The following 11°32' is also retained. No emendation propagated. Certainty: high.

S02-C002 · Reading

Printed p. 16; AB01-PDF0105-body-L040; AB01-PDF0106-body-L001

Page 16 ends umbrae; page 17 begins brae rerum rotabunt. Apparent repeated ending across the physical seam. No deletion or joining of the repeated ending. Certainty: high.

S02-C003 · Reading

Printed p. 10; AB01-PDF0099

Two body calls printed (1); the second bottom note is numbered (2). No replacement of the second body call with (2). Original note call and note heading both retained. Certainty: high.

S02-P001 · Provenance

Printed p. 17; AB01-PDF0106-notes_right-L002

Printed p.230 has an apparent overstrike on the holding-copy scan. Copy-specific marking; not attributed to Nallino as an authorized correction. Underlying 230 remains in the historical transcription. Certainty: mark visible; agency not established.

Editorial scope and source

The 30 source pages were read against the supplied page images. Native-resolution crops were used for difficult readings and the two diagrams. Existing embedded text served only as a comparison aid; no new OCR was run. The table cells are literal transcriptions, not regenerated arithmetical patterns.

The machine-readable ledgers supply stable source anchors, source-image rectangles where applicable, image hashes, table coordinates, marginal dispositions and the current checkpoint. Ordinary text-line anchors identify source page, region and ordinal; they are not asserted to be pixel-exact line boxes. References to Arabic pages printed by Nallino are recorded as locators, not as completed collation with an Arabic canonical edition.

This is a partial S02 candidate: printed pp. 31–109 are not transcribed here. Build and checking receipts accompany the package. They distinguish source reading from technical validation and do not claim an external human or separate-model review.

Nallino, C. A. (Ed. & Trans.). (1903). *Al-Battānī sive Albatēnii opus astronomicum: Pars prima. Versio capitum cum animadversionibus*. Ulrich Hoepli. Controlling witness: SRC01, physical PDF pp. 90–119.
